Art Unit: 1632

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-4, drawn to a targeting construct comprising nucleotide sequences homologous to an adrenomedullin receptor gene and a method of producing a targeting construct, classified in class 435, subclass 320.1.
- Claims 5-7 and 9, drawn to cells comprising a disruption in an adrenomedullin receptor gene, classified in class 435, subclass 325.
- III. Claims 8, 10, and 17-23, drawn to a transgenic non-human animal, particularly a mouse comprising a disruption in an adrenomedullin receptor gene, and a method of making the same, classified in classes 800, 800, and 800 subclass 13, 18, and 25.
- IV. Claims 11-12, drawn to methods of identifying agents that modulate the expression of an adrenomedullin receptor or modulate the function of an adrenomedullin receptor comprising screening said agents in a transgenic non-human animal, classified in class 800, subclass 3.
- V. Claims 13-15, drawn to methods of identifying agents that modulate expression of an adrenomedullin receptor or function of an adrenomedullin receptor gene in a cell *in vitro*, classified in class 435, subclass 7.2.
- VI. Claim 16, drawn to an unknown agent is unclassifiable.

Art Unit: 1632

VII. Claim 24, drawn to phenotypic data, in an electronic database, associated with a transgenic mouse, classified in class 702, subclass 19.

The products of Inventions I, II, III, VI, and VII each from the other are distinct each from the other. Inventions are distinct if it can be shown that they are not disclosed as capable of use together and they have different modes of operation. different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, different function, and different effects. The products of Groups I, II, III, VI, and VII have different chemical structures, are made by different methods, and can be used in different methods which require different technical considerations and materially different reagents. For example, the transgenic non-human animal of Group III can be used as a model of disease while the targeting construct of Group I may be used to disrupt a gene in a somatic cell in vitro, the cells of Group II may be used to isolate a protein, and the data of Group VII may be used for statistical analysis in a database. Also, the agent of group VI has a different chemical structure from the targeting construct, cells, and transgenic non-human animals of Groups I, II, and III respectively, and may be used in different methods, which require different technical considerations with respect to modulation of an adrenomedullin receptor. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, different classifications, and separate search requirement. restriction for examination purposes as indicated is proper.

Application/Control Number: 09/900,519

Art Unit: 1632

Although there are no provisions under the section for "Relationship of Inventions" in MPEP 806.05 for inventive groups that are directed to different methods, restriction is deemed to be proper between groups IV and V, because their methods appear to constitute patentably distinct inventions, each with a distinct purpose and further comprising distinct methodologies and using different products. For example, the method of Group IV requires the use of a transgenic non-human animal while the method of Group V requires the use of a cell *in vitro*. Because these inventions are distinct for the reasons given above and a separate search is required for each of Groups IV and V, restriction for examination purposes as indicated is proper.

The products of Inventions I, II, III, VI, VII and the methods of Invention IV and V are distinct. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, different function, and different effects each from the other. The products of Groups I, II, III, VI and VII can be used in methods that require different technical considerations and materially different reagents from the methods of Groups IV and V. The method of Group IV can be practiced with products that have different chemical structures than the products of Groups I, II, III, VI, VII. For example, the transgenic animals of Group III may be used to produce antibodies while the method of Group IV may be used to identify agents that modulate the expression of an adrenomedullin receptor. Further, the method of Group IV may be practiced with agents that have different chemical structures from the agent of Group VI. Because

Application/Control Number: 09/900,519

Art Unit: 1632

these inventions are distinct for the reasons given above and have acquired a separate

status in the art because of their recognized divergent subject matter, different

classifications, and separate search requirement, restriction for examination purposes

as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must

include an election of the invention to be examined even though the requirement be

traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the

examiner(s) should be directed to Peter Paras, Jr., whose telephone number is 703-

308-8340. The examiner can normally be reached Monday-Friday from 8:30 to 4:30

(Eastern time).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Deborah Reynolds, can be reached at 703-305-4051. Papers related to this

application may be submitted by facsimile transmission. Papers should be faxed via the

PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with

the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The

CM1 Fax Center numbers are (703) 308-4242 and (703) 305-3014.

Inquiries of a general nature or relating to the status of the application should be

directed to Dianiece Jacobs whose telephone number is (703) 305-3388.
